

# BOOM CRYPTO MARKET – COMMUNITY TRUST & TRANSPARENCY!

## INTRODUCTION

With the current boom in the blockchain and cryptocurrency space, it is noticeable that institutional investors have started flooding into the crypto market and the space is supposed to see some real exponential growth; but there is a problem. Being new to the space, this can land these new investors in trouble if they don't find a safe haven for their funds.

Boom Crypto Market is a fast rising Defi project, with a professional marketplace and cryptocurrency asset listing and IDO platform powered by a native token BCM. The project is aimed at bringing absolute transparency, trust and decentralization to the blockchain and cryptocurrency space, a professional platform that bears trust through a smart contract that allows both services providers and buyers to execute contracts without trust issues.

The team came up with the idea of bringing transparency to the cryptocurrency space, to encourage more people to come into the blockchain industry knowing that they can transact in the space not having to worry about who to trust. The idea is highly driven by the need to rid the cryptoverse of scams, rug pulls, frauds and bad actors generally.

Any realistic cryptocurrency CEO, user, investor, trader, or ardent observer who has been in the system for a while can attest to the fact that the cryptocurrency space needs some sanity in terms of transparency. Most of the information out there is just a mirage, and most investors are not tech-savvy while most do not know how to verify information on the blockchain. But with the launch of the cryptocurrency markets projects, a holistic approach to transparency in the blockchain industry will be at the tip of the fingers of the community. The team is poised to deliver a world class product that will serve the blockchain and cryptocurrency space, with a niche to beat already existing professional platforms that do not have smart contracts that escrows contracts between service providers and buyers.

Boom Crypto Market will be a gathering platform for Professionals from all walks of life that would gladly depend on the trust provided on the platform to conduct safe procurements with no need to worry about the character of the other party.

## **THE PROJECT IDEOLOGY**

Boom Crypto Market is a decentralized platform that is aimed at bringing transparency to the cryptocurrency and blockchain industry, also providing users, traders, investors, and institutions with adequate information for a better-informed decision.

Boom Crypto Market is aimed at reducing the hassles of roaming on several platforms before retrieving specific information; the platform will concentrate on centralizing information on a decentralized platform which will in turn save both time and money.

The idea is to maximally eliminate scams from the blockchain and cryptocurrency industry and bestow trust from the unbanked population of the world, the freelance sector, and the remote service providers and buyers. Boom Crypto Market will provide the following Defi services;

### **A Decentralized Staking Platform.**

- Boom Crypto Market will provide staking functionalities, which will enable users who stake BCM token on the platform to earn several cryptocurrency assets including BNB, BUSD, and other cryptocurrencies will be included over time.
- Earnings on other cryptocurrencies will be proportional to BCM token holdings calculated on the platform based on internal formula which will be disclosed to the community once the launched quarter approaches, BCM token will be immediately listed on Pancakeswap.

### **A Decentralized Marketplace.**

- Boom Crypto Market platform will provide a decentralized service providing platform for buyers and sellers of goods to interact without any interference from a third party. In the last couple of years, the global village has expanded and service providers have found the need to work online and remotely more than before and the pandemic which has introduced a new era has made remote services very essential.

- The obstacle has always been the issue of trust between the parties involved and this has limited the corporate world to a great extent, especially the blockchain industry. For example, a project wants to list an asset on a P2P trading exchange but can hardly reach out to the right authorities in charge of offering this service, or a project is in need of promotional services and reaches out to a company to deliver the services and they eventually fall into the hands of fraudsters, make payments to these fraudsters and lose their funds in the process.
- The Boom Crypto Market platform will ensure that no service is being paid for without proof from both parties involved provided on the platform to show completion of contract. The platform will automatically provide a contract receipt as proof of an ongoing or pending transaction; this can be used as voucher by either the service provider or customer as evidence of transaction.
- One of the benefits of this marketplace will be helping start-ups to quickly locate and interact with industry leaders and experts while service buyers get the best professionals working for them, placing the responsibility of identity verification on the Boom Crypto Market platform and a smooth contract settlement on our smart contract.

#### **Cryptocurrency Asset Listing Platform.**

- One of the problems encountered in the cryptocurrency and blockchain space is the lack of accurate information, there seems to be a lot of manipulations going on in so many quarters. The Boom Crypto Market platform will have features like trade history, order book, and daily and total generated volume, current trading volume, active trading platforms, and so much more for each listed token or P2P trading exchange.
- With these features available on the Boom Crypto Market platform, there will be no need to roam around trying to search out information about any asset.

- This will be a platform where all available information about any asset or project will be made available on one platform; it will also be an avenue for projects to create trust between them and their community and also attract investors based on trust.

#### Cryptocurrency assets and exchange listing.

- As the name implies, the Boom Crypto Market platform will list available, credible, and active cryptocurrency projects, exchanges, professionals, and companies on the platform for proper tracking. There will be strict criteria for listing any project, asset, exchange, professional, or company. The process will begin with an application to the appropriate channel for verifications and provision of every other requirement needed by the team.

#### PLATFORM & TOKEN UTILITY

- As a platform that provides a marketplace to help service providers supply services to customers on trust while also helping service buyers to get the service providers, BCM token which is the base token powering the Boom Crypto Market platform will be used for fee payments for all transactions carried out on the platform.
- Buyers and sellers of services can decide to pay or receive payments in BUSD, BNB or BCM. Transaction fee will be paid in BCM, BNB, BUSD depending on what the user chooses. These fees will be used as rewards on the staking platform and for liquidity providers.
- BCM token can also be used for payment for services offered on the marketplace; for example professional adverts, project adverts, promotions and any other value added services offered on the platform.
- Other cryptocurrencies like BUSD, BNB and are currently being integrated including fiats will be available for deposit and swap against BCM on the platform to be used for transactions and processing fees.

- We believe there are a lot of corporate bodies that lose funds annually to both frauds and unprofessional service providers, Boom Crypto Market platform will drastically eliminate these loses while ensuring customers are satisfied with service provided to them. Boom Crypto Market presents a whole new level of blending trust and satisfaction all in on one platform, and there's no sector that is exempted.
- **THE JURY (Governance):** As a platform that will cater for different types of personalities around the world, we believe there will be moments when we could see some disputes and may need a resolution on both sides. Our platform will have a mechanism known as the "Jury" similar to that of a court, in the case of a dispute the smart contract will move the fund release authority to the "Jury" who are categorized by the amount of liquidity provided on the platform.

A user only qualifies as a "Jury" based on the amount of LP staked on the platform. The ecosystem incentivizes users to provide liquidity by giving out rewards both in BCM tokens and in revenue shares from the proceeds made from net fees charged for services on the platform.

We know more and more institutions and sectors are embracing the blockchain and cryptocurrencies globally, but the platform will have available global payment options to enable every sector take advantage of the exceptional services provided on the Boom Crypto Market platform.

Obviously, the problem we are trying to solve has been here since the beginning of time and we are working with a lot of data. But we are also aware that we may not have it all figured out in a day, hence this white paper will be updated as need be to reflect new ideas that will further strengthen the project and continue to eliminate bad actors from the system.

What we have is similar to a security system, but a blockchain Boom Crypto Market security system and many will like to try and beat our system and others will simply come up with new fraudulent tactics; this means we will be on the look out and tweak whatsoever needs to be tweaked.

**AMM TRACKING:** Our system will also track Automated Market Making DEX price charts, depths, token details, total and circulating supply both from the Ethereum and Binance Smart Chain networks. Other networks will be integrated in the course of development.

**HOW OUR SYSTEM WORKS:** Once a token is created on the Ethereum or Binance Smart Chain networks, our system detects the deployment of the contract immediately. The moment liquidity is added to a pair of the token either on a centralized exchange or AMM, our system will also track it making it more transparent for our token holders to be up to date on every occurrence on a particular asset they are interested in.

Token holders will have access to 100% of every activity of any asset they are interested in including current news from credible sources linked with the project, while platform visitors will enjoy very limited resources on our ecosystem. This is because BCM is a governance token and holding the token guarantees certain rights depending on the volume in a user's wallet.

We intend to provide traders and investors with as much and accurate details as possible to enable them make the right decision. BCM token holders will have access to an exclusive token audit that is automatically integrated into our ecosystem, both from verified sources and our internal developers.

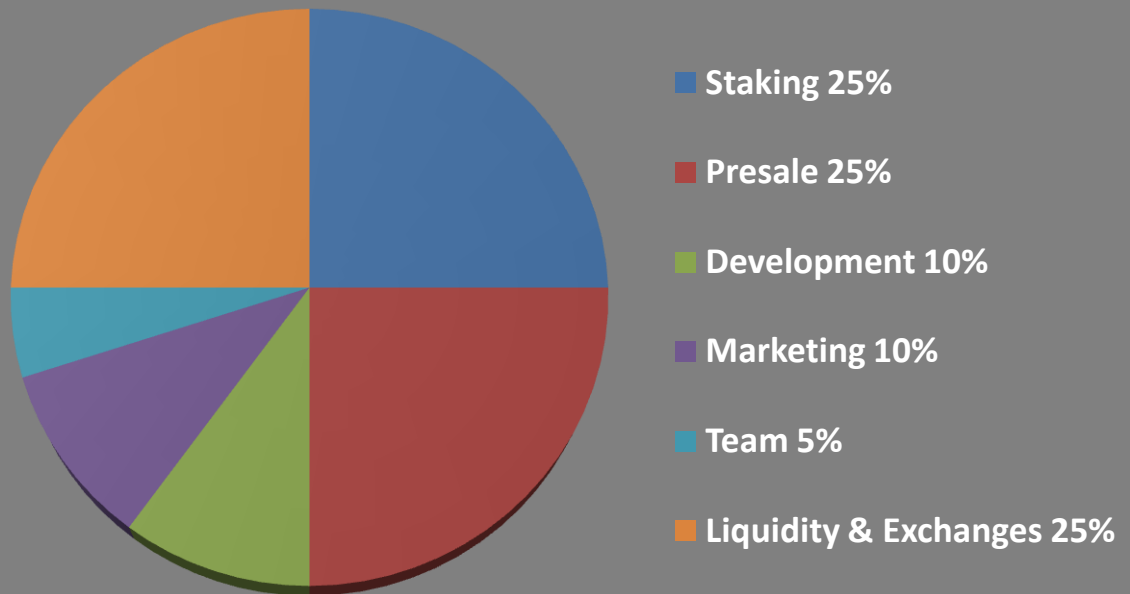

Having a combination of a thorough and in-depth token detail from centralized and Automated Market Making platforms will be a plus for our community, this also means that arbitrage information will be available for traders to leverage on. This provides additional utility for our platform.

## Boom Crypto Market TOKENOMICS

Total Supply - 100,000BCM

Private sale HardCap – 50,000USD

Public sale HardCap – 375,000USD

Private sale – 5,000BCM @ \$10 per token = (HardCap – 50,000USD)

Public sale – 25,000BCM @ \$15 per token = (HardCap – 375,000USD)

Contract address - 0x26caba196478b2eef1ed5009c675c4243bb6d547

Total HardCap – 425,000USD

Boom Crypto Market is a 100% Defi project with 65% of total supply of 100,000BCM tokens up for presale; the project team has decided that there will be a burn of unsold tokens immediately after the presale while the team tokens remains locked for six months.

The team plans to have BCM token on top tier exchanges as soon as the presales are over. New exchange listings apart from PancakeSwap and other listings will be announced to the community as negotiation brokering is perfected.
